

Volkmann Introduces the BBUone Bulk Bag Unloader ***Optimizes Dust-Free Material Flow***

FOR IMMEDIATE RELEASE

Hoist style BBU with special loss-in-weight features.

(April 13, 2012 – Hainesport, NJ) Volkmann, Inc., a market leader in vacuum conveying, now offers a Bulk Bag Unloading Station, the BBUone, built to the same exacting quality standards as its vacuum conveying systems. The BBUone optimizes dust-free material flow from the bag to the vacuum conveyor and downstream processes without any contamination of the material or work environment.

The BBUone has been designed with modular components and many optional features to meet a variety of production requirements. It features a two-ton capacity, a low profile pick-up, and a patent pending dust-tight connector to the feed hopper. This discharge chute connector keeps product flow contained and also prevents dirt and other waste material that has collected on the underside of the bulk bag from entering and contaminating the product flow.

Available in either a fork-lift or hoist version, the BBUone can be customized with frame extension sets and electric chain hoists with passive or active crab mechanisms. Other options include massaging paddles with pneumatic actuators, material agitators

Add One

and material delumpers to aid material flow; a manual or pneumatic covering for the material discharge module; a dust collector to maintain environmental air quality; and an interface for Volkmann conveying systems to move the product downstream in the production process.

About Volkmann

Volkmann engineers and manufactures high quality, high performance vacuum conveyors, bag dump stations, unloaders and equipment for the safe handling of fine chemicals, granules, pellets, tablets, food particles and small components.
